Summary

For 17+ years I've worked at the junction of business and engineering, translating technical constraints into terms non-engineers can act on, and business needs into clear requirements for developers. I owned products even with no direct authority: change control, stakeholder communication and priority-setting across up to 30 applications at once. Above all, I built trust, so that all sides knew that they could come to me and leave with a straight answer. Outside of work, I design, build, and operate two live services and a personal blog, alongside three shipped game prototypes from my game design training at Arcada.

Core competencies

Product Ownership | Change Control | Incident Management | Problem Management | Project Management | Risk Management | Quality Assurance | Stakeholder Communication | Coordination | Automation | Technical Support | Business Analysis | Software Architecture | Disaster Recovery | Security | Web Development

Education

10/2023 – 01/2024: Security Journey
01/2023 – 05/2023: Arcada, Game Design and Production
09/2006 – 06/2011: Moscow Institute of Electronics and Mathematics, Management & Informatics in Technical Systems

Live projects

For details on various personal projects you can refer to this page. Everything is open-sourced and includes:

- 3 game prototypes built with GameMaker, 2 are feature-complete, all 3 playable
- 2 live services: Final Fantasy XIV Tracker, BIC Tracker; both designed, built and managed by me
- Personal blog built from ground up with PHP and MariaDB (mostly reviews, some articles)
- SupOps concept

Professional experience

04/2023 – current: **Senior R&D Support Engineer**, Signant Health, Helsinki, Finland

- Investigate, manage, and triage application incidents and service requests.
- Facilitation of communication in case of high priority/severity or escalated incidents.
- ☑ Submitted over 100 suggestions for product improvement within the first month.
- ☑ Helped with several de-escalations of issues with sponsors.
- ☑ Wrote multiple knowledgebase articles.
- ☑ Occupational Healthcare and Safety representative deputy

09/2021 – 06/2022: **Tier 3 Technical Support Engineer**, Smartly.io, Helsinki, Finland

- Ensured best-in-class technical support and distinguished customer service with lots of analysis and debugging.
- Assisted and trained teammates, while maintaining documentation
- ☑ Drove implementation of Support Handbook, internal collection of manuals and guidelines for customer support.

06/2009 – 07/2021: **Senior Technical Support Analyst**, citi, Moscow

- Managed up to 30 applications with scope similar to product/project manager.
- Facilitated prioritization between business stakeholders and development teams, translating requests and constraints both ways, and escalating blocked resolutions when deadlines were at risk.
- Provided L1, L2 and L3 tech support and change control for most of applications used in Russia and Kazakhstan.
- Led or participated in processes' automation and/or optimization projects.
- Led tech support operators, when in absence of direct manager.
- Coached new tech support operators.
- Debugged new issues and tested new or changed features on a regular basis.
- Developed and maintained internal documentation, server-side and GUI-based automations (scripts).
- ☑ Pioneered huge refactoring of a client-facing application, to implement E-Documents concept: identified the need, drove the concept, led the negotiation (dropped the initial vendor price from $100k down to $55k).
- ☑ Transferred paper-based checklist used by support operators to MS Excel, with automations, traceability, reporting, and statistics gathering (AutomatedRunSheet).
- ☑ Single-handedly managed all tech-related questions for Kazakhstan for 2 years.
- ☑ Almost completely cleared a decade-long backlog for Kazakhstan applications in roughly a year.
- ☑ Progressed internally from Tech Support Specialist → Senior Tech Support Specialist → Tech Support Analyst → Senior Technical Support Analyst, expanding scope from operations to triage to change control and regional application ownership.
